### SQL SELECT, WHERE, DISTINCT practice

1. Write a select statement to return all columns and rows from the customer table.

```
select * from customer
```

2. Write a query to select first name, last name, and email from the customer table.

```
select first_name, last_name, email from customer
```

3. Write a query to return all rows and columns from the film table.

```
select * from film
```

4. Write a query to return unique rows from the release\_year column in the film table.

```
select distinct release_year from film
```

5. Write a query to return unique rows from the rental\_rate column in the film table.

```
select distinct rental_rate from film
```

6. A customer left us some feedback about our store. Write a query to find her email address – for Nancy Thomas.

```
select email from customer
```

```
where first_name = 'Nancy' and last_name = 'Thomas'
```

7. We're trying to find a customer located at a certain address '259 Ipoh Drive' – can you find their phone number?

select phone from address

where address = '259 Ipoh Drive'

8. Write a query from the customer table, where store id is 1 and address id is greater than 150.

select \* from customer

where store\_id = 1 and address\_id > 150

9. Write a query from the payment table where the amount is either 4.99 or 1.99.

select \* from payment

where amount = 4.99 or amount = 1.99

10. Write a query to return a list of transitions from the payment table where the amount is greater than 5.

select \* from payment

where amount > 5
